DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

Claims 1-10 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the independent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented, for example, in independent claim 1, which include a near-field optical head objective lens having a convergent surface, where an incident beam converges to a focal point; and a film, which is formed at the focal point of the convergent surface; where the incident light passes the film and generates the surface plasmon effect on the film surface, and a micro aperture is produced to minimize the diameter of a light spot.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2873

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Thio et al is cited to show an enhanced light transmission apparatus that has an improved aperture geometry, but does not teach forming a micro aperture by focusing the beam to a focal point which is formed at a film surface.
